Application/Control Number: 10/563,595

Art Unit: 1623

cooling a solution comprising the high molecular weight linear α -1,4-glucan and the low molecular weight linear α -1,4-glucan to gel the solution, wherein

the low molecular weight linear α -1,4-glucan has a degree of polymerization of greater than or equal to 180 and less than 620, and has a molecular weight distribution of not greater than 1.25 and.

the high molecular weight linear α -1,4-glucan has a degree of polymerization of greater than or equal to 620 and less than 37000, and has a molecular weight distribution of not greater than 1.25.

(Currently amended) <u>The</u> process for preparing a molded article according to claim 13,

wherein the process further comprises the step of:

neutralizing an alkaline solution comprising the high molecular weight linear α1.4-glucan and the low molecular weight linear α-1.4-glucan to get the solution, wherein

the low molecular weight linear α -1,4-glucan has a degree of polymerization of greater than or equal to 180 and less than 620, and has a molecular weight distribution of not greater than 1.25 and,

the high molecular weight linear α -1,4-glucan has a degree of polymerization of greater than or equal to 620 and less than 37000, and has a molecular weight distribution of not greater than 1.25.
